

KELLER

DATA COLLECTOR FOR WATER LEVELS

DCX-22 AA

100% WATERPROOF, AIR PRESSURE COMPENSATED

This instrument is based on the differential pressure measurement of two absolute sensors. The level sensor is connected by a cable to the electronics housing, which incorporates:

- The electronics with the latest μ P-technology (16 Bit A/D converter)
- The waterproof mounted absolute pressure sensor with steel diaphragm for air pressure measurement resp. -correction
- The easily replaceable battery

The processor circuit collects the signals of the two pressure- and temperature sensors and calculates the differential pressure with an accuracy of 1...2 mbar for ranges up to 10 mWC.

The KELLER data collector DCX-22 AA allows measuring stations to be set up at considerably lower costs compared to conventional systems, offering furthermore the following advantages:

- Autonomous: Battery life ≥ 10 years
- High data security due to the use of a non-volatile memory
- 100% waterproof, guaranteed by the KELLER AA-technology (no ventilation tube)
- High measuring accuracy, resolution and robustness
- Combination of event-controlled recording and interval recording prevents unnecessary data being recorded (i.e. only measuring the level changes...)
- Simple and well structured configuration- and read-out PC-software
- Option of recording the barometric pressure, water- and ambient temperature
- Small level sensor diameter (21 mm)
- Installation data (and comments) of the measuring station can be stored in the level sensor
- The system is configured for a wireless data transfer via modem

Level sensor and open electronics housing

Integrated air pressure sensor with diaphragm protection

KELLER

SPECIFICATIONS:

Measuring-/ Pressure Ranges 800...1800 mbar abs. for ranges up to 5 mWC
 800...2300 mbar abs. for ranges up to 10 mWC

Supply Lithium-Battery 3,6 V
 Battery Life 10 years @ 1 measurement/hour
 Output RS 485 digital
 Electrical Connection Fischer DEE 103A054
 Linearity typ. 0,05 %FS
 Error Band (0...30 °C) typ. 1 mbar (max. 2 mbar)
 Resolution max. 0,0025 %FS
 Long Term Stability typ. 0,5 mbar
 Overload 2 x nominal range

Temperature Measurement Accuracy typ. 1 °C
 Shortest Measuring Cycle 1x per second
 Memory 16'000 or 28'000 measuring values with attributed time (depending on storing method)
 Material in Media Contact Stainless steel 316L (DIN 1.4435) Viton®
 Material of Electronics Housing Anodized Aluminium
 Weight: Housing / Level Sensor ~ 300 g / ~ 70 g (without cable)

INSTALLATION NOTES

The dip pipe is firmly mounted at the measuring place. If the dip pipe is being sunk into the ground, openings have to ensure that water can enter the pipe.

The level sensor, connected by a cable to the electronics housing, is immersed into the pipe. The housing incorporates the electronics, the battery and the air pressure sensor.

The electronics housing is mounted onto the end of the pipe.

The protective cap of the interface must be cleaned from dirt and water prior to removing.

Via data cable, a Laptop is connected to the system on site. The stored measuring values with the programmed parameters can now be read out or the instrument can be reconfigured.

The system is set up for a wireless data transfer via modem.

A vandal-proof metal cap mounted at the end of the system prevents unauthorised access.

The level sensor and the electronics housing form a leak-proof unit and are thus protected against flooding and brackish water.

HARDWARE / SOFTWARE

The configuration- and read-out software is delivered together with the interface cable (K103A). The software is compatible with Windows 2000/NT/XP/ME and 9X.

Writer

The Writer enables the start and configuration of the DCX-data collector.

General functions:

- Online-display of measuring channels
- Status-indication and indication of battery condition
- Editing of installation data
- Ring buffer or normal
- Readjustment of the zero

Recording parameter:

- Pressure- and temperature channels selectable

Start methods:

- Time start
- When exceeding or dropping below a certain pressure
- Measuring interval for starting conditions selectable

Recording methods:

- Interval (1s...18h) and event-controlled recording
- Recording at pressure change
- Turn on/Turn off at pressure thresholds
- Averaging over selectable number of measurements

Reader

The Reader allows the data to be read out into a file and to be saved onto a Laptop or PC.

The data file, which can be imported by programs such as Excel, contains the following data recorder information:

Serial number, measuring range, sensor name, installation data, read-out data, units, measuring values with date and clock time,...

General functions:

- Status-indication and indication of battery condition
- Reading of the recordings' directory
- Read-out of the individual recordings
